CMPC now offers the most reliable plywood. The higher the Goal, the greater the Reward.

# About us

CMPC Maderas is a member of CMPC Enterprises, a forestry group with a worldwide tradition in manufacturing products derived from sustainable plantations.

CMPC Maderas is the industrial branch of CMPC's Forestry Division and our mission is to add value to the company's forestry assets. We achieve this by providing our clients with an integral solution for their lumber needs. This includes industrial lumber, treated lumber products, remanufactured products and plywood panels, all of which are created for a variety of markets and uses.

Production processes are under constant control to ensure compliance with strict international quality standards. This philosophy is designed to achieve powerful solutions to meet customers' requirements.

## Reliability

CMPC's experience and dedication to quality ensure that our customers will receive the best products and the highest service. We strive to build long-term relationships through responsibility and commitment to characteristics that are identifying trademarks of our company.

## Our Philosophy

CMPC has a long history of being a socially responsible company. This dates back to 1920 when the company was just starting and it continues today. This is reflected by the commitment we maintain with our workers and with the surrounding communities.

Every day CMPC renews its commitment to sustainable development through preservation of the environment and implementation of cultural and corporate policies. We work to safeguard the surroundings, natural resources and local communities, in order to provide a better quality of life for future generations.

## Our own plantations

Over 1.3 million acres (520,000 hectares) of CMPC's plantations are located in southern Chile and northern Argentina. The vast holdings ensure a sustainable supply of timber for our industrial business. Our plantations in Chile are certified by Certfor, the national sustainable forest management standard of Chile and is also endorsed by the international scheme PEFC. The company's environmental management system has been certified under ISO 14001. These certifications assure our customers that CMPC products have been harvested from forests that meet the environmental, social and economic standards.

## Integrated operations

CMPC controls the entire process from seed to final product, which is why we are able to ensure and maintain a high standard of quality. Our main focus is to offer integrated solutions for our customers' requirements by implementing productive processes in accordance with environmental and operational guidelines.

Manufacturing plants are located strategically near ports as well as the forestry base. With four sawmills, two remanufacturing plants, a wood treatment plant and a plywood plant, annual production exceeds 1.7 million cubic meters.
